

20). // C++ Program to Find the Largest Element of an Array Using Function with Following Condition:
 // i). Pointer as Formal Argument
 // ii). Sized Array as Formal Argument
 // iii). Unsized Array as Formal Argument

```
#include <iostream>
using namespace std;

// i) Pointer as Formal Argument
int findMaxPointer(int* arr, int size) {
    int max = arr[0];
    for(int i = 1; i < size; i++) {
        if(arr[i] > max)
            max = arr[i];
    }
    return max;
}

// ii) Sized Array as Formal Argument
int findMaxSized(int arr[8]) {
    int max = arr[0];
    for(int i = 1; i < 8; i++) {
        if(arr[i] > max)
            max = arr[i];
    }
    return max;
}

// iii) Unsized Array as Formal Argument
int findMaxUnsized(int arr[], int size) {
    int max = arr[0];
    for(int i = 1; i < size; i++) {
        if(arr[i] > max)
            max = arr[i];
    }
    return max;
}

int main() {
    int arr[8];
    cout << "Enter 8 elements of the array: "<<endl;
    for(int i = 0; i < 8; i++) {
        cin >> arr[i];
    }
}
```

```
cout << "\nLargest Element using Pointer: " << findMaxPointer(arr, 8) << endl;  
cout << "Largest Element using Sized Array: " << findMaxSized(arr) << endl;  
cout << "Largest Element using Unsized Array: " << findMaxUnsized(arr, 8) << endl;
```

```
return 0;
```

```
}
```

★ **Output:**

The screenshot shows a terminal window with the following output:

```
E:\C Programming\C++\Large X + v  
Enter 8 elements of the array:  
33  
54  
566  
67  
900  
864  
2546  
28756  
  
Largest Element using Pointer: 28756  
Largest Element using Sized Array: 28756  
Largest Element using Unsized Array: 28756
